

Effective Implementation of FCTC Policies a pre-WCTOH workshop

register at: www.itconference.com

The World Health Organization's (WHO) Framework Convention on Tobacco Control (FCTC) represents a critical turning point in the

history of tobacco control and has propelled the issue onto the national agenda of many

lower-income countries. Countries that ratify the FCTC are obligated to adopt national-level policies such as larger and more prominent warning labels on cigarette packs, bans on advertising and promotion, elimination of misleading brand descriptors ("light" or "mild"), increased taxation, efforts to combat smuggling, limits on secondhand smoke exposure, tobacco product regulation, and increased access to treatment for addiction.

“ this workshop will include five modules to introduce participants to simple protocols that they can take home to their host country and use ”

To evaluate population level impact of FCTC interventions, this workshop will include five modules to introduce participants to simple protocols that they can take home to their host country and use to measure the impact of smoke-free policies, product warnings and labeling regulations, anti-tobacco mass media, policies to prevent product smuggling and counterfeiting, and surveillance of population beliefs, attitudes and behaviors about tobacco. The Workshop will be led by investigators affiliated with the global Roswell Park Transdisciplinary Tobacco Use Research Center www.roswelltturc.org working on the ITC (International Tobacco Control) Policy Evaluation Project www.igloo.org/itcproject, the U.S. Centers for Disease Control & Prevention (CDC) and World Lung Foundation.

Individuals interested in attending this one-day workshop can register online at www.itconference.com. The workshop will take place in the Hotel Trident, Mumbai on March 8, 2009 from 8:00AM through 4:00PM, leading into the Inaugural Ceremony of the 14th World Conference on Tobacco or Health (WCTOH).

REGISTER:
